

# TOPCON IMAGENET6 INTEGRATION GUIDE

---

## ABOUT

- Crystal's ImageNET6 integration will open the ImageNET6 software based off the patient's account IDs.
- **Account ID's can be changed in ImageNET6 but cannot be changed in Crystal.**
  - *This means that you will need to change all patient ID numbers in ImageNET6 to match each patient's Account ID in Crystal.*

# IMAGENET6 VIEW BUTTON

This button will allow you to view the selected patient's images for review. It DOES NOT allow you to edit them.

## INSTRUCTIONS

1. In Records, click on EHR Settings -> Edit Medical Record Templates
2. In the Edit Records Window, click on Add New Field at the bottom left of the window.
  - a. Text = ImageNET6 – View
  - b. Type = Button
  - c. Select the **Command** radio button
  - d. Select **Pre-loaded Applications** and choose **ImageNET6 View**
  - e. Under Integration Settings, add machine name (**OCT**)
  - f. **Click Save**
3. Right-Click on the Template page you would like to add the button to and click **Add Field to Tab**

The screenshot shows the 'Edit Medical Record Templates' window. The 'Text' field is set to 'ImageNET6 - View' (labeled 'a'). The 'Type' is set to 'Button' (labeled 'b'). The 'Description' field is empty. The 'F9 Keys' field is empty. The 'Button Settings' section shows a table with columns 'Fields', 'Type', and 'Action'. Below the table are buttons for 'Add Command', 'Export', 'Import', and 'Remove Command'. The 'Field Action' radio button is selected (labeled 'c'). The 'Command' section shows 'Pre-loaded Applications' selected (labeled 'd') with 'ImageNet6 View' chosen from the dropdown. The 'Integration Settings' section shows 'OCT' entered in the field (labeled 'e'). Below this is a note: 'Machine Name can be in insight.ini as ImageNetMach=XXX XXX enter in Field Below'. At the bottom, the 'Save' button is highlighted (labeled 'f').

# IMAGENET6 GET FILE BUTTON

This button will open File Explorer to allow you to import PDF files straight into the Patient – Files section. Under Integration Settings, you can put the folder path of the images saved by ImageNet6 or leave blank to search through File Explorer.

## INSTRUCTIONS

1. In Records, click on EHR Settings -> Edit Medical Record Templates
2. In the Edit Records Window, click on Add New Field at the bottom left of the window.
  - a. Text = ImageNET6 – Get File
